Meehan's Brookside LAWN SERVICE

GET YOUR LAWN SUMMER-READY

by watering deeply but infrequently.

Aim to give your grass **1 to 1.5 inches** of water per week (including rain) by soaking the soil **2 to 3 times a week**, which encourages deep, drought-resistant roots.

Follow these best practices to keep your turf lush.

1. TIMING IS EVERYTHING

Water early in the morning (between 5 a.m. and 8 a.m.) This prevents evaporation and stops fungal diseases caused by evening watering.

2. THE "TUNA CAN" TEST

Place empty tuna cans in your yard while the sprinkler runs to easily measure how long it takes to reach 1 inch of water.

3. ADJUST FOR HEATWAVES

In the peak of intense summer heat, step up your watering schedule to **3 or 4 times a week** to keep the grass alive.

4. MOW HIGHER

Keep your mower blades on a higher setting. Taller grass provides natural shade for the soil, keeping it cooler and retaining moisture longer.
