HOW TO STOP LAWN FUNGUS

Before It Takes Over Your Yard

Lawn fungus can quickly turn a beautiful, green yard into a patchy, unhealthy lawn. The key to preventing fungus is early action. By following the right steps, you can stop fungus before it starts and keep your lawn healthy, strong and green all season long.

WHY LAWNS GET FUNGUS

Fungus thrives in lawns that are stressed or kept in conditions of high moisture and poor air circulation. Common causes include:

- Excessive moisture
- Poor air circulation
- Thatch buildup
- Overwatering
- Low mowing
- Soil compaction

EARLY SIGNS OF FUNGUS

The sooner you spot it, the easier it is to stop. Watch for these common signs:

Brown or tan patches

White, cottony fungus growth

Discolored grass blades

Circuler rings in the lawn

PREVENTION IS YOUR BEST DEFENSE

Follow these simple steps to prevent fungus before it takes hold.

1. **MOW PROPERLY** — Keep your mower blades sharp and mow at the proper height for your grass type.
2. **WATER SMART** — Water deeply and infrequently. Avoid watering late in the evening.
3. **IMPROVE AIRFLOW** — Space plants and shrubs to allow good air circulation across your lawn.
4. **REDUCE THATCH** — Core aeration helps reduce thatch and allows air, water and nutrients to reach the roots.
5. **FEED YOUR LAWN** — A healthy, well-fed lawn is more resistant to disease and fungus problems.

PROFESSIONAL TREATMENTS WORK

Preventive fungus control applications are the most effective way to stop fungus before it starts. Our professional treatments protect your lawn and keep it looking its best.

OUR FUNGUS CONTROL PROGRAM INCLUDES:

- Early spring preventive treatment
- Follow-up applications as needed
- Season-long protection
- Healthier, greener, more resilient lawn

DON'T WAIT UNTIL IT'S TOO LATE

Once fungus takes over, it can be harder and more costly to control. Prevent it now and enjoy a thick, green, beautiful lawn all season long!
