Meehan's Brookside LAWN SERVICE

WATERING TIPS

1 GIVE 1 INCH OF WATER EACH WEEK

Turf grass in our climate is recommended to get 1 inch of water each week. The news does a good job at reporting our rainfall totals. In most cases one hour of rain usually equals out to one inch of water.

1 HOUR OF RAIN = 1 INCH OF WATER

2 WATER 3 TIMES PER WEEK

During our hotter and drier periods, you should try to water your lawn three times per week for about 20 minutes in each section. This will be enough to keep your lawn active and not be too stressed out.

SAMPLE SCHEDULE

- START AROUND 6:00 AM
- MONDAY WEDNESDAY FRIDAY
- LARGE AREAS 20 MINUTES
- TREE LAWN & SIDES 10 MINUTES

3 DO NOT WATER DURING THE HEAT OF THE DAY

If you were to water during the heat of the day, much of that water will evaporate before your lawn can benefit from it. If it is too hot outside, this could trigger summer disease, Pythium, that can cause significant damage to your lawn, along with other diseases that could arise.

4 AVOID WATERING AT NIGHT

Also, you do not want to water at night if there is high humidity. If the grass has too much moisture overnight, this can also cause other lawn disease issues.
