

WEED CONTROL

One of the many benefits of our service is our free service calls and our dedication to serve our clients. If at any time the weeds are bothersome, please call our office so we can schedule a free service call to treat the weeds.

After treatment, it takes time for the weeds to absorb the treatment and breakdown. You should expect to see the weeds curling and shriveling within 14 days.

It is our goal to keep your lawn weed free with our program. Although it sounds simple, it is rather challenging considering the following:

- Different types of weeds germinate and show up in the lawn at different times throughout the growing season.

- Many of the weeds require a different strategy or treatment.

- There are some weeds that will require multiple treatments.

YOU'RE PART IN KEEPING YOUR LAWN HEALTHY AND WEED FREE:

- 1 To reduce weed germination, it is important to keep your soil shaded. You can do this by mowing higher (3" or higher).

- 2 During dry times, watering enough to keep the turf healthy and growing (1" to 1.5" of water per week).

- 3 Aerating the soil regularly to encourage healthy roots and a thicker lawn.

- 4 Reseed any thin or bare areas and over seed the lawn. A thick healthy lawn is the best weed prevention.

A combination of the good cultural practices listed above and Brookside's lawn treatments will provide you with a thick, green and weed-free lawn that you deserve.
